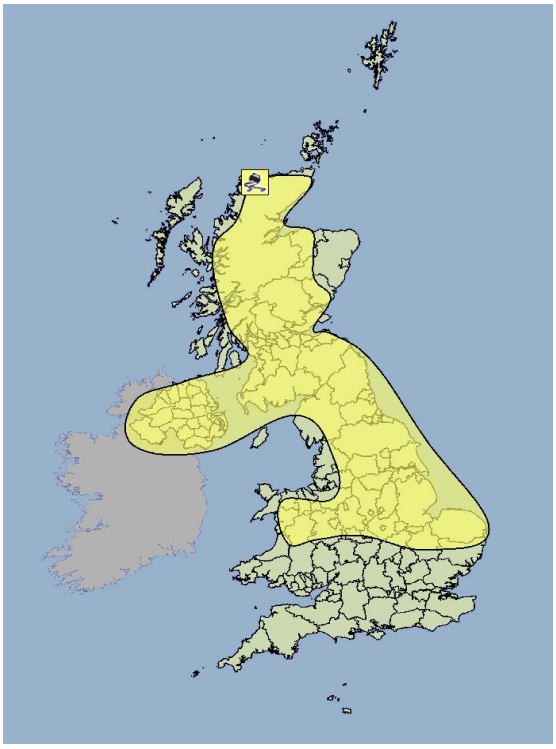
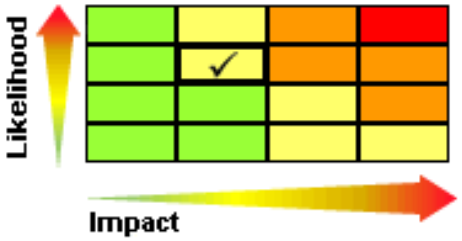
National Severe Weather Warning Service





Chief Forecasters Assessment
Most of the snow accumulations will occur above 200 m where 2-5 cm is likely in places, mainly over higher parts of western Scotland and Northern Ireland where greater amounts are likely at higher elevations. However, 1-2 cm is possible at low levels very locally where heavier showers occur.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **16:00 on Wed, 13th Dec 2017** until **11:00 on Thu, 14th Dec 2017**

Ice will again form on some surfaces from late Wednesday afternoon, which will continue through the night and well into Thursday morning. In addition, wintry showers will spread from the west with some accumulations of snow, though mostly restricted to high ground.

There will probably be icy stretches on untreated roads, pavements and cycle paths with some slippery surfaces likely. There is also a small chance of travel disruption across parts of Scotland and Northern Ireland.
